EaseUS Disk Drives Stats 1 (Size/Brands/Type) for 2024

The choice of hard drive type, brand, and capacity has always been a dilemma for users. To better access these questions, as a expert EaseUS™ user and a PC/Tech lover who loves to discover the new trends, we've made 3 articles, SSD/HDD, SSD/USB/HDD, and SSD/HDD/USB drives.

Based on the survey results, we have conducted detailed analysis of the usage, SSD/HDD types, capacity and speed of hard drives. The report from [EaseUS](#) will provide users with all the details.

What Kind of Hard Disk Do People Like to Use?

From the survey, EaseUS found the number of [SSD](#) users is increasing, much more than that of HDD and USB drive users.

We can expect the SSD tech drives, with SSD users accounting for 40.74%, HDD users accounting for 38.64%, and USB drive users accounting for 20.62% in the statistics, we have made the following conclusions:

- 1.1. The number of SSD users continuously increases, surpassing the number of HDD and USB drive users.
- 1.2. Compared to HDD, smaller SSDs are usually the choice for users. More than half of SSD users choose SSDs with a capacity of 1TB or smaller.
- 1.3. The most popular USB drives are usually in the range of 256GB to 1TB. The big and extra-natural of USB drives users have also occupied a certain share, but they're few. HD videos, photos, and more on them. This is why users prefer USB drives with large capacities.

So, what USB drive, HDD, and SSD capacity should users choose? In the following analysis, we will provide you with more details.

Which Bus Type Has the Largest Number of Followers?

While analyzing the stats, Easeus discovered that currently, SATA and NVMe are the market's two most popular bus interface types. Our survey undoubtedly confirms the facts once again.

Our survey shows:

- 76.19% of users prefer SATA, followed by NVMe of 23.81%.
- 5.8% of professional users choose to make use of dual-disks, i.e., SATA and NVMe.
- Also, 3.99% of users choose USB.
- In addition, 2.18% of users choose hard drives with dual NVMe interfaces.
- 0.8% choose hard drives with three SATA interfaces.

From the stats, it can be seen that people prefer SATA and NVMe interface types. This is because they are the fastest interfaces, with NVMe considerably faster than the SATA. Since the release of NVMe, it has gotten gained many supporters. Currently, the highest speed of NVMe PCIe 5.0 SSD can reach 32000MB/s, and the speed of NVMe PCIe 4.0 SSD can reach 16000MB/s, which is 4 times faster than SATA.

Although SATA is slower than NVMe, it has matures technology and compatibility. Moreover, compared to NVMe, SATA is more budget-friendly. Therefore, the interface of HDD users is still temporarily ahead of NVMe.

How Much Capacity Do People Prefer to Use?

How much disk space can meet the current usage? To answer this question, EaseUS software has conducted a detailed analysis and a study of the usage of data with different capacities. The details are as follows:

- Most HDD users choose a capacity of 1TB-2B ~ 1.7B, accounting for 40.67% of the total.
- 20.19% of users choose 2B-4B ~ 3.5 2B.
- Only 4% of all users choose a capacity of 4B ~ 7B.
- The number of HDD users who choose other capacities is relatively small.

Among SSD users, the details are different:

- 256GB~512GB seems to be the most common choice, accounting for approximately 58.16% of the total.
- In addition, 26.3% of users have chosen SSDs with a capacity of 1B-2B~ 2B.
- There are also 10.13% of users who have chosen SSDs with a capacity of 512B ~ 1 TB.
- 5.74% of users SSDs with a 4 GB~ 2B~ 5B capacity.
- The number of users who choose other capacities is relatively small.

As mentioned at the beginning of the report, the number of HDD and USB drive users is quite similar, but the capacity ranges they choose are quite different.

- 64.4% of USB drive users have chosen a capacity of 1B ~ 2B~ 2B.
- Users who have chosen 1B~ 2B~ 2B B account for 21.19%.
- The number of users who have chosen 2 GB~ 2B~ 4 GB~ 2B~ 5B~ 6 GB is almost the same, at 14.41% and 13.99% (10.19% and 10.73% respectively).

Upon reading this, you might question why the amount of USB drive users is lower than HDD, but the number of USB drive users with large capacities is higher than HDD. Actually, this is because HDD users usually choose 1TB and 2TB hard drives' storage capacity to store a large amount of data, while USB drives are mainly used to back data when power is low. In this way, it can ensure safety and protect data, especially for valuable data on the computer.

On the other hand, USB is also favored by many users for its excellent portability and wide compatibility. Users can easily use USB drives to transfer data between different devices and operating systems. All these platforms support USB drives. This has resulted in a certain number of USB drive and HDD users.

According to the above three conclusions, 256GB-512GB is a common choice for many HDD, SSD, and USB drive users. However, is 256GB enough? How big a hard drive is enough?

> There is no standard answer. It depends on what the user wants to do with the hard drive. For example:
>
> - If the user does not need to store HD videos, games, or large files, 256GB is enough. But it may not be enough. Running a hard drive at 100 [capacity](#) is counter-choice. Moreover, more and more users are inclined to purchase hard drives with larger capacities, such as 512 GB ~ 1 TB.

What Are the Most Popular Hard Disk Brands and Models?

EaseUS survey results show that users have their preferred brands for SSDs, HDDs, and USB drives. The details are as follows:

- The top three SSD brands include Kingston, Samsung, and Crucial.
- The top three HDD brands are Seagate, Toshiba, and WD.
- The top three USB drive brands include Kingston, Sandisk, and Zower.

The most popular models of these SSD brands are as follows:

1. Kingston is the most popular SSD brand, and the two most popular models are:

KINGSTON SA400S37480G

KINGSTON SA400S37480G

2. Next, Samsung is the second most popular SSD brand, with the five most popular models being:

Samsung SSD 980 PRO 1TB

Samsung SSD 840 EVO 500GB

Samsung SSD 970 EVO Plus 1TB

Samsung SSD 860 PRO 2TB

3. Crucial is also a well-known SSD brand among users. The CT500MX500SSD1 model is quite popular.

4.The above-popular SSD brands and models undoubtedly attract numerous first-rate recognize. They are all well-known brands with high-quality products. Users can trust them. Moreover, they have made continuous improvements in working systems, technologies, firmware, and hardware. Users can purchase them. These factors make them popular among users.

The most popular models of these HDD brands are as follows:

1. Seagate is the most popular HDD brand, particularly the following models:

ST4000DM000-2EP102

ST1000LM048-2AH172

2. Toshiba is next, with the TOSHIBA DT01ACA100 model being particularly popular.

3. WD (Western Digital) is also beloved by HDD users, particularly the WD WCC4E0ZXJ0H4HHD model.

4.These HDD models offer high value for money and their retail unit fee speeds are also quite good compared to others. They have large storage spaces and run relatively quickly. Most importantly, they are easy to set up and use. Thereby, earning them widespread recognition among users.

The most popular models of these USB brands are as follows:

1. The USB disk brand most favored by users is Kingston, particularly the DataTraveler 3.0 model.

2. Next, many users also choose the Sandisk brand, with the Sandisk Cruiser model being the most popular.

3. Sandisk Cruiser USB drives also popular among users.

4.USB drives are popular due to their small size and portability. These popular USB drive series come from trusted brands and also are very affordable. Compared with SSD and HDDs, they deliver higher virtual value for money. Generally, they have storage capacities, data transferring speeds, and durability that perfectly to provide an elegant and secure way to save files.

The following content compares the factors' storage device. Kindly share this report to let more people know about it.

Which Is the Fastest Hard Disk?

In this survey, EaseUS conducted the most write speed tests on all disks and identified the top ten models. On average, drives with the fastest read write speed. Surprisingly, the devices with the fastest write speeds are not the fastest regarding disk writing. First, see which brands have the fastest sequential and random read write speeds.

Vendor Model Name	MB_S	Vendor Model Name	RW4_K
Crucial CT2000P7700SSD8	12000	TOSHIBA KBG40ZNV512G	12000
Crucial CT2000P7700SSD8	6000	Crucial CT2000P7700SSD8	12000
SOLIDIGM SSDPFKKW040T7	7000	Crucial CT2000P7700SSD8	10000
SEAGATE ST4000DM000-2T7103	7000	SOLIDIGM SOLIDIGM SSDPFKKW040T7	8000
Kenny KDPA 3.0 2TB	7000	Kenny KDPA 3.0 2TB	7000
TOSHIBA KBG40ZNV512G	7000	SEAGATE ST4000DM000-2T7103	7000

INTEL MEMPEK1W032GAX	6984	PCIEG NVMe M Same 2TB	6254
Fanxiang S770 2TB	6254	SAMSUNG MZ-V8P4T0B/AM	6254

Sequential read and write speed play a significant role in daily office processes. Therefore, if you need to transfer or copy many large files daily, consider acquisition brand with top speed when choose a storage device. Random read write refers to tasks involving fragmented files such as virus scanning, booting programs, etc.)

For example, when copying hundreds of images simultaneously, starting the computer, or booting games, you can notice more performance. You can [SSD](#) check out some [games](#) with ready-write speed, and USB Speed using Task Manager or other third-party software.

> Tip
>
> In general, both sequential and random read and write have advantages during our daily use and are both important. Therefore, when choosing a storage device, there is no need to be overly concerned about sequential write speed.

From the table, you can see that if you want a hardware device with top speed, you might consider the following brands and models:

TOSHIBA - KBG40ZNV512G - 8294G/W

Crucial - CT2000P7700SSD8 - 8294G/W

Crucial - CT2000P7700SSD8 - 8294G/W

Kenny - NVMe SSD 2TB - 8294G/W

In the next part, we'll summarize this report and give our suggestions on how to choose a hard disk to store different files.

2023 EaseUS Drive Stats 5- Summary and Suggestion

To derive statistics as useful from start to finish as possible for the second quarter, EaseUS software analyzed the type, capacity, and speed of the old hard drives of the 2023rd users. In this process, we made some discoveries.

The popular brands of HDD, SSD, and USB drives vary. The details are as follows:

- The most popular SSD brands are Kingston and Samsung.
- The most popular HDD brands are Seagate, Toshiba, and WD.
- The most popular USB drive brands are Kingston and Sandisk.

1. Without a doubt, the hard drive type with the fastest speed is SSD, among which the following models have the highest speed:

KINGSTON SA2000M8250G

Kenny NVMe SSD 2TB

INTEL MEMPEK1W032GAX

2. Compared to SSDs, HDDs' read and write speeds are relatively slower, with the fastest HDD models being:

WDC WD40NMZW-11GX6S1

SAMSUNG HD154UI

3. Among the three mainstream hard drive types, the speed of the USB disk is the slowest. Transcend JetFlash 790 USB 3.1 flash memory is the only.

When choosing between SSD, HDD, and USB drives, you typically have to prefer different capacities. The details are as follows:

The most commonly chosen capacity by HDD users is: 256GB-2TB

The most commonly chosen capacity by SSD users is: 128GB - 512GB

The most commonly chosen capacity by USB drive users is: 256GB - 2TB

Based on this survey, we recommend that you determine the type and capacity of your storage device according to your needs:

Device	Files to Store	Reason	Capacity Suggested
SSD	OS, games, high-speed	More reliable, with no moving parts, High-speed	No less than 256GB
HDD	Data	High Capacity	No less than 512GB
USB Disk	Data backup	Portable	16-64GB, 64GB-1TB, depending on your needs

If you simply want to store data and don't require high speed for transferring, choosing HDD is a better option. Here is why:

It offers a large capacity and is not expensive, which can help you eliminate the issue of insufficient space. You might want to choose an HDD larger than 256GB (depending on your needs), especially if you have a large number of games or large applications.

These HDDs come with powerful caches that can help you quickly perform your data-during-proof outages and effectively maintain data safety and integrity.

However, when you want to store valuable data, it is recommended to choose SSDs. Here is why:

It offers the fastest speed, offering users quicker boot-up times and a smoother gaming experience.

Since systems and games usually take up a lot of space, it is recommended that you choose an SSD larger than 256GB (you can choose a larger SSD if you have the budget, especially if you have a large number of games or large applications).

Generally speaking, read and write speeds from 20 MB/s to 80 MB/s are considered normal. If you encounter slow read and write speeds, you can choose SSDs. The top speed of SSDs is 10 times that of HDDs and can reach 10,000MB per second.

As for USB disk, it is better for data backup due to its small size and large capacity. The reasons are as follows:

It is portable and supports plug-and-play, allowing users to access backed-up data anytime and anywhere.

However, there are some points to note. Introduce systems, files, and other game devices support different file systems, so make sure your USB disk is compatible with your device before using it. Moreover, always scan any device you connect to your USB disk to avoid data loss or damage.
